Introduction

This book talks about the relationship between the world's ancient languages of Amarigna, Tigrigna and Hindi. According to Legesse Allyn's exhaustive 25-year research, he has determined that Amarigna and Tigrigna are said to precede the ancient Egyptian civilization. On the other hand, Hindi is a vernacular spoken by the world's second most populated country.

Hindi's origin lies in Sanskrit, a language believed to be spoken by our gods who are believed to transcend the creation itself. It is a well known and an accepted fact that one of the earliest known evidences of an Indo-Aryan dialect (considered as a predecessor to Sanskrit) are from the Mitanni state of the mid-late 2nd millennium BCE. The Mitanni state was roughly located where Syria is today. The Indo-European loan words have been found in Kassite (today's Iran) documents too.

These modern day discoveries of the Mitanni and Kassite cultures only strengthen the author's claims where he finds the roots of the Hindi words in the language spoken by people who are displaced a little further more in geography from the modern day Syria, i.e., Ethiopia. Thus, this book makes a sincere attempt to find the links between these ancient and mystical languages. The author has taken a step further towards the Vedic philosophy, which is surmised in the Sanskrit phrase "Vasudhaiva Kutumbam," which means, "The world is one family."

Before we go any further, it is important to understand what Legesse has already accomplished...

Legesse has shown, that the hieroglyphic language has lived on intact outside of Egypt, among the people who inhabited the very lands that gave birth to the Egyptian civilization, the lands which are now known as Ethiopia and Eritrea. The hieroglyphic languages of Amarigna and Tigrigna are still widely used and spoken in Ethiopia and Eritrea today. The author has successfully reinterpreted the Rosetta Stone with his knowledge of Amarigna and Tigrigna much to the disbelief and astonishment of the scholars.

A pattern emerging out of his research is that, scholars have repeatedly ignored the history of the African region and its influence on the greatest civilizations of the world. The National Geographic Genographic Project's report on migration of humans from Africa and the claims of death of the Egyptian hieroglyphic language, when it was not, all point in the same direction.

In this regard it is pertinent to quote Dr. Fikre Tolossa, a renowned Ethiopian playwright and author, "If Legesse's discovery is real, it is phenomenal and revolutionary. Its impact on the study of hieroglyphs, Amharic and Tigrigna languages, as well as on the history of Egypt, Ethiopia, and Eritrea, is tremendous. Even the skeptics will have to examine it before they decide to reject or accept it." The author's claims are strong and need to be definitely examined before arriving at any conclusions at all!

It is an accepted fact that Hindi words have roots in Sanskrit. However, the roots of Sanskrit words, along with those of most other languages in the world, can be traced to the ancient Egyptian hieroglyphic language and the Ethiopian/Eritrean Amarigna and Tigrigna languages. Like all of Legesse Allyn's "Roots of" books, this book depends heavily upon standard etymologies of words and names as listed in Doug Harper's Online Etymology Dictionary (www.etymonline.com)

Etymologies can be simply defined as history of words, but Etymonline.com describes it best, "Etymologies are not definitions; they're explanations of what our words meant 600 or 2,000 years ago. Think of it as looking at pictures of your friends' parents when they were your age... These are histories of words only, not things or ideas. The modern word for something might have replaced old, forgotten words for the same object or concept... "

This book is a work in progress. He has endeavored to cover many basic words in Hindi, but with so many Hindi words it is by no means complete and it's anybody's guess as to what it takes to accomplish a task such as this. A book of this nature requires in-depth understanding of evolution of changes in sound between languages. Care and effort have been taken to ensure that this book is not too technical in terms of detail of information.

The book makes a case for a light reading and at the same time can be of use for a serious academic exercise, too. Related words have been taken from a wide variety of family of languages. And two hieroglyphs representing each root word have been included, so that you can see real words from the root words that have been found in ancient Egyptian artifacts, in tombs and on monuments up to 5100 years ago. I sincerely hope that this book aids you in your pursuit of knowledge. Thank you!

This is from Proto-Indo-European *pel(e)-tu-, from root *pele- (2) "flat, to spread" (see plane (n.1)). shore (n.)

"land bordering a large body of water," c.1300, from an Old English word or from Middle Low German schor "shore, coast, headland," or Middle Dutch scorre "land washed by the sea," all probably from Proto-Germanic *skur-o- "cut," from Proto-Indo-European *(s)ker- (1) "to cut" (see shear (v.)).

According to etymologists originally with a sense of "division" between land and water. But if the word began on the North Sea coast of the continent, it might as well have meant originally "land 'cut off' from the mainland by tidal marshes" (compare Old Norse skerg "an isolated rock in the sea," related to sker "to cut, shear"). Old English words for "coast, shore" were strand (n.), warob, ofer. Few Indo-European languages have such a single comprehensive word for "land bordering water" (Homer uses one word for sandy beaches, another for rocky headlands). General application to "country near a seacoast" is attested from 1610s.

BECAME IN ENGLISH & EUROPEAN LANGUAGES:

moon (n.) (English)

moon (n.)

Old English mona, from Proto-Germanic *menon- (cognates: Old Saxon and Old High German mano, Old Frisian mona, Old Norse mani, Danish maane, Dutch maan, German Mond, Gothic mena "moon"), from Proto-Indo-European *me(n)ses- "moon, month" (cognates: Sanskrit masah "moon, month;" Avestan ma, Persian mah, Armenian mis "month;" Greek mene "moon," men "month;" Latin mensis "month;" Old Church Slavonic meseci, Lithuanian menesis "moon, month;" Old Irish mi, Welsh mis, Breton miz "month"), probably from root *me- "to measure," in reference to the moon's phases as the measure of time.

A masculine noun in Old English. In Greek, Italic, Celtic, Armenian the cognate words now mean only "month." Greek selene (Lesbian selanna) is from selas "light, brightness (of heavenly bodies)." Old Norse also had tungl "moon," ("replacing mani in prose" - Buck), evidently an older Germanic word for "heavenly body," cognate with Gothic tuggl, Old English tungol "heavenly body, constellation," of unknown origin or connection. Hence Old Norse tunglfylling "lunation," tunglærr "lunatic" (adj.). (see demeqe (\$\mathcal{L} \mathcal{P} \Phi) be bright (v-perf.) (Amarigna))

This is from Proto-Indo-European *ster- (2) "star" (cognates: Sanskrit star-, Hittite shittar, Greek aster, astron, Latin stella, Breton sterenn, Welsh seren "star"), of uncertain connection to other roots. Some suggest it is from a root meaning "to strew, scatter." Buck and others doubt the old suggestion that it is a borrowing from Akkadian istar "venus." The source of the common Balto-Slavic word for "star" (Lithuanian žvaigžde, Old Church Slavonic zvezda, Polish gwiazda, Russian zvezda) is not explained.

Meaning "a consideration which puts something in a certain view (as in in light of) is from 1680s.

Proto-Indo-European apparently had two roots for fire: *paewr- and *egni- (source of Latin ignis). The former was "inanimate," referring to fire as a substance, and the latter was "animate," referring to it as a living force (compare water (n.1)).

The Germanic words are from PIE *nekwt- "night" (cognates: Greek nuks "a night," Latin nox, Old Irish nochd, Sanskrit naktam "at night," Lithuanian naktis "night," Old Church Slavonic nosti, Russian noch', Welsh henoid "tonight"), according to Watkins, probably from a verbal root *neg- "to be dark, be night." For spelling with -gh- see fight.

Compare German Weihnachten "Christmas." In early times, the day was held to begin at sunset, so Old English monanniht "Monday night" was the night before Monday, or what we would call Sunday night. The Greeks, by contrast, counted their days by mornings.

Apparently felt as inadequate in its basic sense, leading to the more distinctive formation wifman (source of woman). Dutch wijf now means, in slang, "girl, babe," having softened somewhat from earlier sense of "bitch." German cognate Weib also tends to be slighting or derogatory and has been displaced by Frau.

The more usual Indo-European word is represented in English by queen/quean. Words for "woman" also double for "wife" in some languages. Some proposed Proto-Indo-European roots for wife include *weip-

A highly stable word across the Indo-European languages. In the few cases where other words provide the sense, it is where the cognate of brother had been applied widely to "member of a fraternity," or where there was need to distinguish "son of the same mother" and "son of the same father." E.g. Greek adelphos, probably originally an adjective with frater and meaning, specifically, "brother of the womb" or "brother by blood;" and Spanish hermano "brother," from Latin germanus "full brother."

French soeur "a sister" (11c., instead of *sereur) is directly from Latin soror, a rare case of a borrowing from the nominative case.

Compare also Sanskrit vatula- "insane," literally "windy, inflated with wind."

1540s, "mentally slow, lacking ordinary activity of mind, dull, inane," from Middle French stupide (16c.) and directly from Latin stupidus "amazed, confounded; dull, foolish," literally "struck senseless," from stupere "be stunned, amazed, confounded," from Proto-Indo-European *stupe- "hit," from root *(s)teu-(1) "to push, stick, knock, beat" (see steep (adj.)). The Latin word was widely borrowed (Old French escole, French école, Spanish escuela, Italian scuola, Old High German scuola, German Schule, Swedish skola, Gaelic sgiol, Welsh ysgol, Russian shkola). Translated in Old English as larhus, literally "lore house," but this seems to have been a glossary word only.

Of complexion, from c.1300; of the weather, from late 14c.; of meanings or explanations, "manifest to the mind, comprehensible," c.1300. "The Hindi language is rooted in the east African, ancient Egyptian dual languages of Amarigna and Tigrigna. This book provides a small sampling of Hindi's not so distant African linguistic roots."

The remains of our earliest human ancestor, Dinkinesh ("you are marvelous"), was found in Hadar, Ethiopia in the Awash Valley. Also known as Lucy, her fossil remains provided a glimpse into our genetic past. Recent research may now provide a glimpse into our linguistic past.

According to modern science, including archaealogy and DNA research, National Geographic's Genographic Project has used advanced DNA analysis to determine when Africans left east Africa to populate the world. According to their study involving nearly one million participants, approximately only 60,000 and 30,000 years ago Africans left to populate what is now India.

When they did, they took the languages of Amarigna and Tigrigna from east Africa with them. This book provides a small glimpse of the Hindi language's connection to its African liguistic past.
